The final database contains information on 820 biosurveillance systems.

Of these, 708 study humans, 180 study animals, and 65 study plants. We found 111 systems which conduct syndromic surveillance and 101 which did not, but were unable to find syndromic surveillance information for 608 systems.

Table 1: Table 1. Classes of biosurveillance conducted. Note: for “Syndromic” variable, “Blank” and “Not Found” entries were combined.

Humans	Animals	Plants	Syndromic
Yes :708	Yes :180	Yes : 65	Yes :111
No : 97	No :612	No :723	No :101
Not found: 15	Not found: 28	Not found: 32	Not found:608
